Sedative Hypnotics

Policy # 00359
Original Effective Date: 08/21/2013
Current Effective Date: 09/12/2022

Applies to all products administered or underwritten by Blue Cross and Blue Shield of Louisiana and its subsidiary, HMO Louisiana, Inc. (collectively referred to as the “Company”), unless otherwise provided in the applicable contract. Medical technology is constantly evolving, and we reserve the right to review and update Medical Policy periodically.

When Services May Be Eligible for Coverage
Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:

- Benefits are available in the member’s contract/certificate, and
- Medical necessity criteria and guidelines are met.

For Patients with “Step Therapy” (generic before brand) ONLY:
Based on review of available data, the Company may consider brand name sedative hypnotics including, but not limited to Edluar®‡ (zolpidem sublingual), Intermezzo®‡ (zolpidem sublingual), Lunesta®‡ (eszopiclone), Rozerem®‡ (ramelteon), Silenor®‡ (doxepin), Sonata®‡ (zaleplon), Ambien®/Ambien CR®‡ (zolpidem), Zolpidem oral spray, Dayvigo™‡ (lemborexant), Quviviq™ (daridorexant), and Belsomra®‡ (suvorexant) to be eligible for coverage** when one of the below patient selection criteria is met:

**Patient Selection Criteria
Coverage eligibility for brand name sedative hypnotics will be considered when one of the following criteria is met:

- There is clinical evidence or patient history that suggests the generically available products will be ineffective or cause an adverse reaction to the patient; OR
- Patient has tried and failed (e.g., intolerance or inadequate response) a generic sedative hypnotic (e.g., generic zolpidem immediate release, generic zolpidem extended release, generic zolpidem sublingual tablets, generic zaleplon, generic ramelteon, generic doxepin, or generic eszopiclone).

When Services Are Considered Not Medically Necessary
Based on review of available data, the Company considers the use of brand name sedative hypnotics when patient selection criteria are not met or for usage not included in the above patient selection criteria to be not medically necessary.**
When Services May Be Eligible for Coverage

Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:

- Benefits are available in the member’s contract/certificate, and
- Medical necessity criteria and guidelines are met.

For Patients with “Prior Authorization” ONLY:
Based on review of available data, the Company may consider Dayvigo (lemborexant) or Quviviq (daridorexant) to be eligible for coverage** when the below patient selection criteria are met:

Patient Selection Criteria
Coverage eligibility for Dayvigo (lemborexant) or Quviviq (daridorexant) will be considered when the following criteria are met:

- Patient has a diagnosis of insomnia; AND
- Patient is 18 years of age or older; AND
- Patient has tried and failed (e.g., intolerance or inadequate response) TWO of the following GENERIC products for the condition: zolpidem (immediate release or extended release tablets [NOT sublingual]), zaleplon capsules, or eszopiclone tablets unless there is clinical evidence or patient history that suggests the use of these GENERIC products will be ineffective or cause an adverse reaction to the patient.
  (Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary** if not met.)

When Services Are Considered Investigational
Coverage is not available for investigational medical treatments or procedures, drugs, devices or biological products.

Based on review of available data, the Company considers the use of Dayvigo (lemborexant) or Quviviq (daridorexant) for any indication other than insomnia or for patients younger than 18 years of age to be investigational.*
Sedative Hypnotics

Policy # 00359
Original Effective Date: 08/21/2013
Current Effective Date: 09/12/2022

When Services Are Considered Not Medically Necessary
Based on review of available data, the Company considers the use of Dayvigo (lemborexant) or Quviviq (daridorexant) when the patient has not tried and failed (e.g., intolerance or inadequate response) TWO of the above-listed generic products to be not medically necessary.**

When Services May Be Eligible for Coverage
Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:
• Benefits are available in the member’s contract/certificate, and
• Medical necessity criteria and guidelines are met.

For Patients With BOTH “Prior Authorization” AND “Step Therapy”:
Based on review of available data, the Company may consider brand name sedative hypnotics including, but not limited to Edluar (zolpidem sublingual), Intermezzo (zolpidem sublingual), Lunesta (eszopiclone), Rozerem (ramelteon), Silenor (doxepin), Sonata (zaleplon), Ambien/Ambien CR (zolpidem), Zolpidist (zolpidem oral spray), Dayvigo (lemborexant), Quviviq (daridorexant), and Belsomra (suvorexant) to be eligible for coverage** when the patient selection criteria for the requested drug is met:

Patient Selection Criteria
Coverage eligibility will be considered for brand name sedative hypnotics with ALL of the specific drug’s criteria are met:
• For Dayvigo or Quviviq requests ONLY:
  o Patient has a diagnosis of insomnia; AND
  o Patient is 18 years of age or older; AND
  o Patient has tried and failed (e.g., intolerance or inadequate response) TWO of the following GENERIC products for the condition: zolpidem (immediate release or extended release tablets [NOT sublingual]), zaleplon capsules, or eszopiclone tablets unless there is clinical evidence or patient history that suggests the use of these GENERIC products will be ineffective or cause an adverse reaction to the patient. (Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary** if not met.)
• For all other brand name sedative hypnotics requests:
Sedative Hypnotics

Policy # 00359
Original Effective Date: 08/21/2013
Current Effective Date: 09/12/2022

- There is clinical evidence or patient history that suggests the generically available products will be ineffective or cause an adverse reaction to the patient; OR
- Patient has tried and failed (e.g., intolerance or inadequate response) a generic sedative hypnotic (e.g., generic zolpidem immediate release, generic zolpidem extended release, generic zolpidem sublingual tablets, generic zaleplon, generic ramelteon, generic doxepin, or generic eszopiclone).

When Services Are Considered Investigational
Coverage is not available for investigational medical treatments or procedures, drugs, devices or biological products.

Based on review of available data, the Company considers the use of Dayvigo (lemborexant) or Quviviq (daridorexant) for any indication other than insomnia or for patients younger than 18 years of age to be investigational.*

When Services Are Considered Not Medically Necessary
Based on review of available data, the Company considers the use of Dayvigo (lemborexant) or Quviviq (daridorexant) when the patient has not tried and failed (e.g., intolerance or inadequate response) TWO of the above-listed generic products to be not medically necessary.**

Based on review of available data, the Company considers the use of brand name sedative hypnotics (other than Dayvigo or Quviviq) when the patient has not tried and failed a generic sedative hypnotic to be not medically necessary.**

Background/Overview
Sedative hypnotics include drugs with various mechanisms of action. Drugs such as zolpidem (Ambien, Ambien CR, Edluar, Intermezzo, and Zolpimist), Sonata, and Lunesta interact with the gamma-aminobutyric acid (GABA) receptor complexes located near the benzodiazepine receptors. These agents are Schedule IV controlled substances. Belsomra, Dayvigo, and Quviviq are orexin receptor antagonists and also Schedule IV substances. Rozerem is a melatonin receptor agonist and Silenor is a tricyclic compound that acts as an H1 receptor antagonist. Neither Rozerem nor Silenor

are controlled substances. Rozerem’s unique mechanism of action may be beneficial for older patients with or at risk for memory/cognitive/psychomotor impairment.

**Rationale/Source**
This medical policy was developed through consideration of peer-reviewed medical literature generally recognized by the relevant medical community, U.S. Food and Drug Administration approval status, nationally accepted standards of medical practice and accepted standards of medical practice in this community, technology evaluation centers, reference to federal regulations, other plan medical policies, and accredited national guidelines.

The patient selection criteria presented in this policy take into consideration clinical evidence or patient history that suggests the available generic sedative hypnotics will be ineffective or cause an adverse reaction to the patient. Based on a review of the data, in the absence of the above mentioned caveats, there is no advantage of using a brand name sedative hypnotic over the available generic sedative hypnotics. Generic drugs are considered to have equal bioavailability and efficacy in comparison to brand name drugs.

08/10/2022  Medical Policy Implementation Committee approval. Added new drug, Quviviq, to the policy with relevant criteria and background information.

Next Scheduled Review Date:  08/2023

*Investigational – A medical treatment, procedure, drug, device, or biological product is Investigational if the effectiveness has not been clearly tested and it has not been incorporated into standard medical practice. Any determination we make that a medical treatment, procedure, drug, device, or biological product is Investigational will be based on a consideration of the following:

A. Whether the medical treatment, procedure, drug, device, or biological product can be lawfully marketed without approval of the U.S. Food and Drug Administration (FDA) and whether such approval has been granted at the time the medical treatment, procedure, drug, device, or biological product is sought to be furnished; or

B. Whether the medical treatment, procedure, drug, device, or biological product requires further studies or clinical trials to determine its maximum tolerated dose, toxicity, safety, effectiveness, or effectiveness as compared with the standard means of treatment or diagnosis, must improve health outcomes, according to the consensus of opinion among experts as shown by reliable evidence, including:

1. Consultation with technology evaluation center(s);
2. Credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community; or
3. Reference to federal regulations.

**Medically Necessary (or “Medical Necessity”) - Health care services, treatment, procedures, equipment, drugs, devices, items or supplies that a Provider, exercising prudent clinical judgment, would provide to a patient for the purpose of preventing, evaluating, diagnosing or treating an illness, injury, disease or its symptoms, and that are:

A. In accordance with nationally accepted standards of medical practice;
B. Clinically appropriate, in terms of type, frequency, extent, level of care, site and duration, and considered effective for the patient's illness, injury or disease; and
C. Not primarily for the personal comfort or convenience of the patient, physician or other health care provider, and not more costly than an alternative service or sequence of services at least as likely to produce equivalent therapeutic or diagnostic results as to the diagnosis or treatment of that patient's illness, injury or disease.
