Topical Acne Kits

Policy # 00344
Original Effective Date: 02/20/2013
Current Effective Date: 03/13/2023

Applies to all products administered or underwritten by Blue Cross and Blue Shield of Louisiana and its subsidiary, HMO Louisiana, Inc. (collectively referred to as the “Company”), unless otherwise provided in the applicable contract. Medical technology is constantly evolving, and we reserve the right to review and update Medical Policy periodically.

When Services May Be Eligible for Coverage
Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:

- Benefits are available in the member’s contract/certificate, and
- Medical necessity criteria and guidelines are met.

Based on review of available data, the Company may consider topical acne kits (including, but not limited to Levoclen®‡ [benzoyl peroxide and topical lotion], Zacare®‡ [benzoyl peroxide and hyaluronate sodium], Cleanse and Treat® pads [benzoyl peroxide and salicylic acid], Duac CS®‡ [benzoyl peroxide and clindamycin], and Benzaclin CareKit®‡ [clindamycin, benzoyl peroxide, and hyaluronic acid]) to be eligible for coverage** when one of the below patient selection criteria is met:

Patient Selection Criteria
Coverage eligibility will be considered for topical acne kits when one of the following criteria is met:

- The patient has tried one prescription topical acne product (brand or generic versions of topical adapalene, azelaic acid, benzoyl peroxide, clindamycin, dapsone, or sulfacetamide/sulfur containing products) AND one prescription topical acne cleanser (brand or generic topical benzoyl peroxide or sulfacetamide/sulfur containing products); or
- There is clinical evidence or patient history that suggests separate brand or generic topical acne products and topical acne cleansers will be ineffective or cause an adverse reaction to the patient.

When Services Are Considered Not Medically Necessary
Based on review of available data, the Company considers the use of topical acne kits when patient selection criteria are not met or for usage not included in the above patient selection criteria to be not medically necessary.**
Topical Acne Kits

Policy # 00344
Original Effective Date: 02/20/2013
Current Effective Date: 03/13/2023

**Background/Overview**
Topical acne products and topical acne cleansers are used in the treatment of acne. Benzoyl peroxide containing products are generally indicated for the treatment or prevention of mild to moderate acne vulgaris. Adapalene products are indicated for the treatment of acne. Azelaic acid is indicated for the topical treatment of mild to moderate inflammatory acne vulgaris and for the treatment of inflammatory pustules and papules of mild to moderate acne rosacea. Topical clindamycin and dapsone gel are indicated for the treatment of acne vulgaris. Sulfacetamide sodium and sulfur are antimicrobial and antiseptic agents, respectively which aid in the removal of keratin and drying of the skin. Sometimes, combinations of products are packaged together in convenience kits.

**Rationale/Source**
This medical policy was developed through consideration of peer-reviewed medical literature generally recognized by the relevant medical community, U.S. Food and Drug Administration approval status, nationally accepted standards of medical practice and accepted standards of medical practice in this community, technology evaluation centers, reference to federal regulations, other plan medical policies, and accredited national guidelines.

The patient selection criteria presented in this policy takes into consideration clinical evidence or patient history that suggests separate brand or generic topical acne products and topical acne cleansers will be ineffective or cause an adverse reaction to the patient. Based on a review of the data, in the absence of the above-mentioned caveat, there is no advantage of using a topical acne kit over a combination of the available brand or generic topical acne products and cleansers.

**Medically Necessary (or “Medical Necessity”)** - Health care services, treatment, procedures, equipment, drugs, devices, items or supplies that a Provider, exercising prudent clinical judgment, would provide to a patient for the purpose of preventing, evaluating, diagnosing or treating an illness, injury, disease or its symptoms, and that are:

A. In accordance with nationally accepted standards of medical practice;
B. Clinically appropriate, in terms of type, frequency, extent, level of care, site and duration, and considered effective for the patient's illness, injury or disease; and
C. Not primarily for the personal comfort or convenience of the patient, physician or other health care provider, and not more costly than an alternative service or sequence of services at least as likely to produce equivalent therapeutic or diagnostic results as to the diagnosis or treatment of that patient's illness, injury or disease.

For these purposes, “nationally accepted standards of medical practice” means standards that are based on credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community, Physician Specialty Society recommendations and the views of Physicians practicing in relevant clinical areas and any other relevant factors.
