Select Long-Acting Insulin Products

Policy #  00728
Original Effective Date:  02/08/2021
Current Effective Date:  04/10/2023

Applies to all products administered or underwritten by Blue Cross and Blue Shield of Louisiana and its subsidiary, HMO Louisiana, Inc. (collectively referred to as the “Company”), unless otherwise provided in the applicable contract. Medical technology is constantly evolving, and we reserve the right to review and update Medical Policy periodically.

When Services May Be Eligible for Coverage
Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:

- Benefits are available in the member’s contract/certificate, and
- Medical necessity criteria and guidelines are met.

Based on review of available data, the Company may consider select insulin glargine products including, but not limited to branded insulin glargine-yfgn, branded insulin glargine, branded Semglee-yfgn™, and branded insulin degludec to be eligible for coverage** when the below patient selection criterion is met.

Patient Selection Criteria
Coverage eligibility will be considered for select insulin glargine products, including but not limited to branded insulin glargine-yfgn, branded insulin glargine, branded Semglee-yfgn, and branded insulin degludec when the following criterion is met:

- There is clinical evidence or patient history that suggests the use of Lantus®† (insulin glargine), Levemir®† (insulin detemir), Toujeo®† (insulin glargine), or Tresiba®† (insulin degludec) will be ineffective or cause an adverse reaction to the patient.

When Services Are Considered Not Medically Necessary
Based on review of available data, the Company considers the use of select insulin glargine products, including but not limited to branded insulin glargine-yfgn, branded insulin glargine, branded Semglee-yfgn, and branded insulin degludec when the patient selection criterion is not met to be not medically necessary.**
Select Long-Acting Insulin Products

**Policy #**  00728  
**Original Effective Date:**  02/08/2021  
**Current Effective Date:**  04/10/2023

**Background/Overview**  
The long acting products mentioned in this policy are approved for both Type 1 and Type 2 diabetes mellitus. Branded insulin glargine-yfgn, branded Semglee-yfgn, branded insulin glargine, and Lantus all contain 100 units per mL of insulin glargine. Levemir contains 100 units per mL of insulin detemir. Toujeo contains 300 units per mL of insulin glargine. Tresiba and branded insulin degludec contain either 100 or 200 units per mL of insulin degludec.

**Rationale/Source**  
This medical policy was developed through consideration of peer-reviewed medical literature generally recognized by the relevant medical community, U.S. Food and Drug Administration approval status, nationally accepted standards of medical practice and accepted standards of medical practice in this community, technology evaluation centers, reference to federal regulations, other plan medical policies, and accredited national guidelines.

The patient selection criterion presented in this policy takes into consideration clinical evidence or patient history that suggests the use of Lantus, Levemir, Toujeo, or Tresiba will be ineffective or cause an adverse reaction to the patient. Based on a review of the data, in the absence of the above-mentioned caveat, there is no advantage of using branded insulin glargine-yfgn, branded insulin glargine, branded Semglee-yfgn, or branded insulin degludec over Lantus, Levemir, Toujeo, or Tresiba.

Next Scheduled Review Date: 03/2024

*Investigational – A medical treatment, procedure, drug, device, or biological product is Investigational if the effectiveness has not been clearly tested and it has not been incorporated into standard medical practice. Any determination we make that a medical treatment, procedure, drug, device, or biological product is Investigational will be based on a consideration of the following:

A. Whether the medical treatment, procedure, drug, device, or biological product can be lawfully marketed without approval of the U.S. Food and Drug Administration (FDA) and whether such approval has been granted at the time the medical treatment, procedure, drug, device, or biological product is sought to be furnished; or

Original Effective Date: 02/08/2021
Current Effective Date: 04/10/2023

B. Whether the medical treatment, procedure, drug, device, or biological product requires further studies or clinical trials to determine its maximum tolerated dose, toxicity, safety, effectiveness, or effectiveness as compared with the standard means of treatment or diagnosis, must improve health outcomes, according to the consensus of opinion among experts as shown by reliable evidence, including:
   1. Consultation with technology evaluation center(s);
   2. Credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community; or
   3. Reference to federal regulations.

**Medically Necessary (or “Medical Necessity”) - Health care services, treatment, procedures, equipment, drugs, devices, items or supplies that a Provider, exercising prudent clinical judgment, would provide to a patient for the purpose of preventing, evaluating, diagnosing or treating an illness, injury, disease or its symptoms, and that are:

A. In accordance with nationally accepted standards of medical practice;
B. Clinically appropriate, in terms of type, frequency, extent, level of care, site and duration, and considered effective for the patient's illness, injury or disease; and
C. Not primarily for the personal comfort or convenience of the patient, physician or other health care provider, and not more costly than an alternative service or sequence of services at least as likely to produce equivalent therapeutic or diagnostic results as to the diagnosis or treatment of that patient's illness, injury or disease.

For these purposes, “nationally accepted standards of medical practice” means standards that are based on credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community, Physician Specialty Society recommendations and the views of Physicians practicing in relevant clinical areas and any other relevant factors.
