Adlarity® (donepezil patch)

Policy # 00824
Original Effective Date: 01/09/2023
Current Effective Date: 01/09/2023

 Applies to all products administered or underwritten by Blue Cross and Blue Shield of Louisiana and its subsidiary, HMO Louisiana, Inc. (collectively referred to as the “Company”), unless otherwise provided in the applicable contract. Medical technology is constantly evolving, and we reserve the right to review and update Medical Policy periodically.

When Services May Be Eligible for Coverage

Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:

• Benefits are available in the member’s contract/certificate, and
• Medical necessity criteria and guidelines are met.

Based on review of available data, the Company may consider Adlarity®‡ (donepezil patch) to be eligible for coverage** when the below patient selection criteria are met.

Patient Selection Criteria

Coverage eligibility for Adlarity will be considered when the following criteria are met:

• Patient has a diagnosis of mild, moderate, or severe dementia of the Alzheimer’s type; AND
• Patient has tried and failed (e.g., intolerance or inadequate response) at least TWO alternative agents for the treatment of mild, moderate, and severe dementia. Examples of alternative agents include donepezil tablets, donepezil ODT, rivastigmine (patch or capsule), and memantine unless there is clinical evidence or patient history that suggests the use of at least TWO alternative agents will be ineffective or cause an adverse reaction to the patient. (Note: This specific patient selection criterion is an additional Company requirement for coverage eligibility and will be denied as not medically necessary** if not met.)

When Services Are Considered Not Medically Necessary

Based on review of available data, the Company considers the use of Adlarity (donepezil patch) when the patient has not tried and failed at least TWO alternative agents for the treatment of dementia to be not medically necessary.**
Adlarity® (donepezil patch)

Policy #  00824
Original Effective Date:  01/09/2023
Current Effective Date:  01/09/2023

When Services Are Considered Investigational
Coverage is not available for investigational medical treatments or procedures, drugs, devices or biological products.

Based on review of available data, the Company considers the use of Adlarity (donepezil patch) for any indication other than the treatment of mild, moderate, and severe dementia of the Alzheimer’s type to be investigational.*

Background/Overview
Adlarity is a transdermal patch indicated for the treatment of mild, moderate, and severe dementia of the Alzheimer’s type. It is supplied as 5 mg and 10 mg patches with the initial dose being 5 mg per day and dose increases to 10 mg/day permitted after 4 to 6 weeks. Each patch should be worn for 7 days. For patients switching from an oral donepezil product, the dose should be kept the same as the daily oral dose. Adlarity was approved based on bioavailability studies comparing it to oral donepezil. Thus, the generically available products likely provide equally efficacious and more cost-effective treatment options for patients with dementia.

FDA or Other Governmental Regulatory Approval
U.S. Food and Drug Administration (FDA)
Adlarity is approved for the treatment of mild, moderate, and severe dementia of the Alzheimer’s type.

Rationale/Source
This medical policy was developed through consideration of peer-reviewed medical literature generally recognized by the relevant medical community, U.S. Food and Drug Administration approval status, nationally accepted standards of medical practice and accepted standards of medical practice in this community, technology evaluation centers, reference to federal regulations, other plan medical policies, and accredited national guidelines.

The efficacy of Adlarity was determined based on a relative bioavailability study in healthy subjects comparing Adlarity transdermal system to Aricept®‡ (donepezil) tablets. Since these different dosage forms of donepezil have not been compared for efficacy, no statements of superiority can be made.
Adlarity® (donepezil patch)

Policy #  00824
Original Effective Date:  01/09/2023
Current Effective Date:  01/09/2023

Patient selection criteria presented in this policy take into account clinical evidence or patient history that suggests the patient cannot tolerate the alternative formulations of donepezil and other agents for the treatment of dementia. Based on review of available data, in the absence of this caveat, there is no advantage of using Adlarity over the available generic formulations of donepezil or other agents to treat dementia.

*Investigational – A medical treatment, procedure, drug, device, or biological product is Investigational if the effectiveness has not been clearly tested and it has not been incorporated into standard medical practice. Any determination we make that a medical treatment, procedure, drug, device, or biological product is Investigational will be based on a consideration of the following:

A. Whether the medical treatment, procedure, drug, device, or biological product can be lawfully marketed without approval of the U.S. Food and Drug Administration (FDA) and whether such approval has been granted at the time the medical treatment, procedure, drug, device, or biological product is sought to be furnished; or

B. Whether the medical treatment, procedure, drug, device, or biological product requires further studies or clinical trials to determine its maximum tolerated dose, toxicity, safety, effectiveness, or effectiveness as compared with the standard means of treatment or diagnosis, must improve health outcomes, according to the consensus of opinion among experts as shown by reliable evidence, including:

1. Consultation with technology evaluation center(s);
2. Credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community; or
3. Reference to federal regulations.
**Medically Necessary (or “Medical Necessity”) - Health care services, treatment, procedures, equipment, drugs, devices, items or supplies that a Provider, exercising prudent clinical judgment, would provide to a patient for the purpose of preventing, evaluating, diagnosing or treating an illness, injury, disease or its symptoms, and that are:

A. In accordance with nationally accepted standards of medical practice;
B. Clinically appropriate, in terms of type, frequency, extent, level of care, site and duration, and considered effective for the patient's illness, injury or disease; and
C. Not primarily for the personal comfort or convenience of the patient, physician or other health care provider, and not more costly than an alternative service or sequence of services at least as likely to produce equivalent therapeutic or diagnostic results as to the diagnosis or treatment of that patient's illness, injury or disease.

For these purposes, “nationally accepted standards of medical practice” means standards that are based on credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community, Physician Specialty Society recommendations and the views of Physicians practicing in relevant clinical areas and any other relevant factors.
