Select External Insulin Infusion Pumps (Omnipod® Pods)

Policy # 00834  
Original Effective Date: 04/10/2023  
Current Effective Date: 04/10/2023

Applies to all products administered or underwritten by Blue Cross and Blue Shield of Louisiana and its subsidiary, HMO Louisiana, Inc. (collectively referred to as the “Company”), unless otherwise provided in the applicable contract. Medical technology is constantly evolving, and we reserve the right to review and update Medical Policy periodically.

When Services May Be Eligible for Coverage

Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:

- Benefits are available in the member’s contract/certificate, and
- Medical necessity criteria and guidelines are met.

Based on review of available data, the Company may consider the use of select external insulin infusion pumps, including but not limited to Omnipod, Omnipod Dash, and Omnipod 5, to be eligible for coverage for the treatment of patients with a diagnosis of insulin dependent diabetes who meet the following criteria:

Patient Selection Criteria

Coverage eligibility for select external insulin infusion pumps, including but not limited to Omnipod, Omnipod Dash, and Omnipod 5, will be considered when the following criteria are met:

Note: Insulin pump must be prescribed by an endocrinologist or physician with similar skill and training in the management of external insulin pumps.

- Supporting clinical documentation from either the patient’s primary physician or a consulting endocrinologist must be submitted for review when requesting the insulin pump; AND
- The patient/family has completed a comprehensive diabetes education program; AND
- A complete assessment that provides documented evidence of patient/family commitment to self-management of the insulin pump including documentation of very good compliance with the current self-management program; AND
- Patient must be on a program of multiple daily insulin injections (3 or more per day) with frequent self-adjustments of insulin for at least 6 months prior to the initiation of insulin pump therapy; AND

Policy #  00834
Original Effective Date:  04/10/2023
Current Effective Date:  04/10/2023

- Patient must have the ability to self-monitor blood glucose levels at least four times/day as documented on a certificate of medical necessity form; AND
- The patient must also meet one or more of the following criteria while on multiple daily insulin injections:
  - Hgb A1c is > 7%; OR
  - History of recurrent hypoglycemia; OR
  - Wide fluctuations in blood sugar levels before meals (pre-prandial blood glucose levels frequently exceeding 140 mg/dl); OR
  - Presence of Dawn Phenomenon with fasting blood sugar values frequently exceeding 200 mg/dl; OR
  - History of severe glycemic excursions (usually associated with brittle diabetes, hypoglycemic unawareness, nocturnal hypoglycemia, extreme insulin sensitivity and/or very low insulin requirements).

**Note:** Members who have been on insulin pump therapy prior to enrollment with BCBSLA must have documentation of glucose self-monitoring at least four times/day during the month prior to enrollment.

### When Services Are Considered Investigational

Coverage is not available for investigational medical treatments or procedures, drugs, devices or biological products.

Based on review of available data, the Company considers the use of select external insulin infusion pumps, including but not limited to Omnipod, Omnipod Dash, and Omnipod 5, when the patient selection criteria are not met to be **investigational.**

### Background/Overview

The Omnipod Insulin Management System, Omnipod Dash Insulin Management System, and Omnipod 5 Automated Insulin Delivery System are intended for subcutaneous delivery of insulin at set and variable rates for the management of diabetes mellitus in persons requiring insulin. These products offer an alternative to traditional insulin pumps and multiple daily injections. The pods deliver up to 3 days’ worth of continuous insulin. The Omnipod Insulin Management System, also known as Omnipod “Classic,” is set to be discontinued on December 31, 2023. The Omnipod Dash

works with a Personal Diabetes Manager, where a patient can log their glucose values and carbs into a bolus calculator and the device automatically calculates the insulin needed to bolus. The Omnipod 5 connects directly with the Dexcom® G6 Continuous Glucose Monitoring System to automatically adjust a patient’s insulin every 5 minutes based on glucose values. Patients can automatically calculate their insulin bolus doses by using the Omnipod 5 App on the Controller or on a compatible smart phone. Regardless of which system is being used, the pods should be replaced at least once every 72 hours or after delivering 200 units of U-100 insulin, whichever comes first. Of note, the pods from the different Omnipod systems are not interchangeable with one another. For example, Omnipod Pods will not be compatible with an Omnipod Dash system.

**Rationale/Source**
This medical policy was developed through consideration of peer-reviewed medical literature generally recognized by the relevant medical community, U.S. Food and Drug Administration approval status, nationally accepted standards of medical practice and accepted standards of medical practice in this community, technology evaluation centers, reference to federal regulations, other plan medical policies, and accredited national guidelines.

*Investigational – A medical treatment, procedure, drug, device, or biological product is Investigational if the effectiveness has not been clearly tested and it has not been incorporated into standard medical practice. Any determination we make that a medical treatment, procedure, drug, device, or biological product is Investigational will be based on a consideration of the following:

A. Whether the medical treatment, procedure, drug, device, or biological product can be lawfully marketed without approval of the U.S. Food and Drug Administration (FDA) and whether such approval has been granted at the time the medical treatment, procedure, drug, device, or biological product is sought to be furnished; or

B. Whether the medical treatment, procedure, drug, device, or biological product requires further studies or clinical trials to determine its maximum tolerated dose, toxicity, safety, effectiveness, or effectiveness as compared with the standard means of treatment or diagnosis, must improve health outcomes, according to the consensus of opinion among experts as shown by reliable evidence, including:
   1. Consultation with technology evaluation center(s);
   2. Credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community; or
   3. Reference to federal regulations.

**Medically Necessary (or “Medical Necessity”) - Health care services, treatment, procedures, equipment, drugs, devices, items or supplies that a Provider, exercising prudent clinical judgment, would provide to a patient for the purpose of preventing, evaluating, diagnosing or treating an illness, injury, disease or its symptoms, and that are:

A. In accordance with nationally accepted standards of medical practice;

B. Clinically appropriate, in terms of type, frequency, extent, level of care, site and duration, and considered effective for the patient's illness, injury or disease; and

C. Not primarily for the personal comfort or convenience of the patient, physician or other health care provider, and not more costly than an alternative service or sequence of services at least as likely to produce equivalent therapeutic or diagnostic results as to the diagnosis or treatment of that patient's illness, injury or disease.
