## sodium oxybate (Xyrem<sup>®</sup>)

Policy # 00532

Original Effective Date: 01/01/2017

Current Effective Date: 09/19/2018

*Applies to all products administered or underwritten by Blue Cross and Blue Shield of Louisiana and its subsidiary, HMO Louisiana, Inc. (collectively referred to as the "Company"), unless otherwise provided in the applicable contract. Medical technology is constantly evolving, and we reserve the right to review and update Medical Policy periodically.*

### When Services May Be Eligible for Coverage

Coverage for eligible medical treatments or procedures, drugs, devices or biological products may be provided only if:

- Benefits are available in the member's contract/certificate, and
- Medical necessity criteria and guidelines are met.

Based on review of available data, the Company may consider sodium oxybate (Xyrem<sup>®</sup>)<sup>‡</sup> for the treatment of cataplexy in narcolepsy or excessive daytime sleepiness in narcolepsy to be **eligible for coverage**.

### Patient Selection Criteria

Coverage eligibility for sodium oxybate (Xyrem) will be considered when the following criteria are met:

- Patient has a diagnosis of Narcolepsy type 1 (narcolepsy with cataplexy) with presence of daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least 3 months that is confirmed by diagnostic testing consistent with BCBSLA medical policies; OR  
*(Note: The 3 month timeframe is an additional Company requirement for coverage eligibility and will be denied as not medically necessary\*\* if not met)*
- Patient has a diagnosis of Narcolepsy type 2 (narcolepsy without cataplexy) with the presence of daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least 3 months that is confirmed by diagnostic testing consistent with BCBSLA medical policies; AND
  - Patient has tried and failed (inadequate response or intolerance) **TWO** of the following medications:
    - One of the following: modafanil product OR armodafanil product; AND
    - One of the following: methylphenidate, dextroamphetamine, or amphetamine/dextroamphetamine salt*(Note: The 3 month timeframe and the requirement for prior use of TWO drugs are additional Company requirements for coverage eligibility and will be denied as not medically necessary\*\* if not met)*

### When Services Are Considered Not Medically Necessary

Based on review of available data, the Company considers the use of oxybate (Xyrem) WITHOUT a trial and failure of TWO other drugs for Narcolepsy Type 2 to be **not medically necessary.\*\***

Based on review of available data, the Company considers the use of oxybate (Xyrem) WITHOUT the presence of daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least 3 months for Narcolepsy Type 1 or Narcolepsy Type 2 to be **not medically necessary.\*\***

Policy # 00532

Original Effective Date: 01/01/2017

Current Effective Date: 09/19/2018

## **When Services Are Considered Investigational**

*Coverage is not available for investigational medical treatments or procedures, drugs, devices or biological products.*

Based on review of available data, the Company considers the use of oxybate (Xyrem) for any indication other than its FDA approved indications to be **investigational**.\*

## **Background/Overview**

Xyrem is approved for the treatment of cataplexy in narcolepsy and excessive daytime sleepiness in narcolepsy. The mechanism of action of Xyrem in narcolepsy is unknown. It is hypothesized that the therapeutic effects of Xyrem in these conditions are mediated through GABA<sub>B</sub> actions at nonadrenergic and dopaminergic neurons and also at thalamocortical neurons. Guidelines from the American Academy of Sleep Medicine list Xyrem as an effective treatment of cataplexy, daytime sleepiness, and disrupted sleep due to narcolepsy. The guidelines also list modafinil type products as effective for the treatment of daytime sleepiness due to narcolepsy. Amphetamine, dextroamphetamine, their combo, and methylphenidate are considered effective for the treatment of daytime sleepiness as well. For narcolepsy type 2, the generically available alternatives are a more economical option.

## **FDA or Other Governmental Regulatory Approval**

U.S. Food and Drug Administration (FDA)

Xyrem was approved in 2002 for the treatment of cataplexy in narcolepsy and excessive daytime sleepiness in narcolepsy.

## **Rationale/Source**

The intent of this policy is to ensure that Xyrem is being used per the FDA approved package insert indication as well as ensuring that more economical, yet equally efficacious alternatives are being used where applicable.

\*Investigational – A medical treatment, procedure, drug, device, or biological product is Investigational if the effectiveness has not been clearly tested and it has not been incorporated into standard medical practice. Any determination we make that a medical treatment, procedure, drug, device, or biological product is Investigational will be based on a consideration of the following:

- A. Whether the medical treatment, procedure, drug, device, or biological product can be lawfully marketed without approval of the U.S. FDA and whether such approval has been granted at the time the medical treatment, procedure, drug, device, or biological product is sought to be furnished; or
- B. Whether the medical treatment, procedure, drug, device, or biological product requires further studies or clinical trials to determine its maximum tolerated dose, toxicity, safety, effectiveness, or effectiveness as compared with the standard means of treatment or diagnosis, must improve health outcomes, according to the consensus of opinion among experts as shown by reliable evidence, including:
  - 1. Consultation with the Blue Cross and Blue Shield Association technology assessment program (TEC) or other nonaffiliated technology evaluation center(s);
  - 2. Credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community; or
  - 3. Reference to federal regulations.

\*\*Medically Necessary (or "Medical Necessity") - Health care services, treatment, procedures, equipment, drugs, devices, items or supplies that a Provider, exercising prudent clinical judgment, would provide to a patient for the purpose of preventing, evaluating, diagnosing or treating an illness, injury, disease or its symptoms, and that are:

- A. In accordance with nationally accepted standards of medical practice;
- B. Clinically appropriate, in terms of type, frequency, extent, level of care, site and duration, and considered effective for the patient's illness, injury or disease; and
- C. Not primarily for the personal comfort or convenience of the patient, physician or other health care provider, and not more costly than an alternative service or sequence of services at least as likely to produce equivalent therapeutic or diagnostic results as to the diagnosis or treatment of that patient's illness, injury or disease.

For these purposes, "nationally accepted standards of medical practice" means standards that are based on credible scientific evidence published in peer-reviewed medical literature generally recognized by the relevant medical community, Physician Specialty Society recommendations and the views of Physicians practicing in relevant clinical areas and any other relevant factors.
